

A short overview of T_EX and its children . . .

Arno Trautmann*

This paper tries to give a short overview of the development of T_EX. So far, most of the information is taken from the article *A brief history of T_EX*, volume II by Arthur Reutenauer in the proceedings of EuroBachT_EX2007. Additional information is taken from documentations (see references). All information is up to the date of the generated pdf. Everything here is without guarantee – this is just to get an overview. Consult the references for further (and/or correct) information!

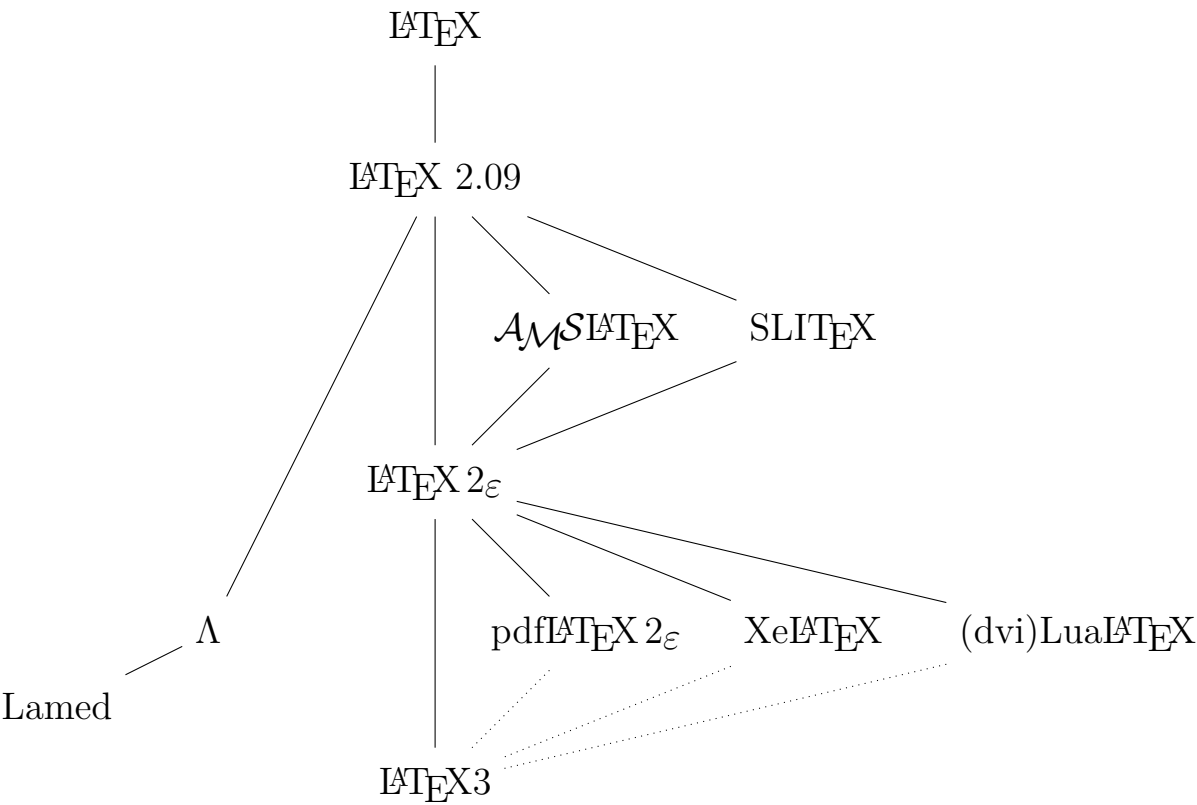

*arno.trautmann@gmx.de – Please feel free to mail me any suggestions and comments!

T_EX – the program, and extensions/derivatives

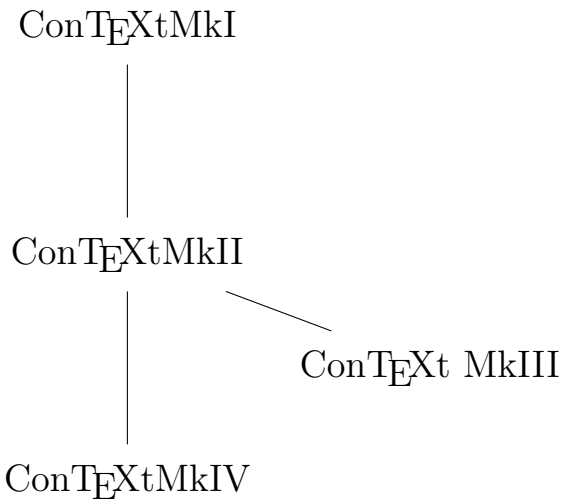

V_{T_EX}

L^AT_EX (Lamport's T_EX) – a format and large macro package for T_EX

ConT_EXt – the other major format and T_EX macro package

T_EX's "little" helpers

This is a small section to mention programs that are very helpful and specially designed to support the work with T_EX.
